

BOEING TOUR

An aerial, high-angle photograph of a Boeing aircraft, likely a 787 Dreamliner, on the assembly line. The aircraft is white with yellow accents and is positioned diagonally across the frame. The surrounding area is a vast, well-lit industrial facility with various pieces of equipment, including yellow scissor lifts and other ground support equipment. The background shows the complex structure of the factory, with multiple levels and a high ceiling. The overall scene conveys a sense of large-scale industrial production and engineering.

Fast Forward to the Future.

The Future of Flight Aviation Center & Boeing Tour offers a unique opportunity to view airplanes being built for Boeing's worldwide airline customers.

The Boeing Everett Factory is the world's largest building by volume and home to the 747, 767, 777, and 787 Dreamliner production lines.

"Must see!"

– Sarah G.

"Mind blowing."

– Simon W.

"The scale is beyond belief."
