THE MUSEUM OF FLIGHT

Take Flight.

WHAT TO EXPECT

The Living Computer Museum facility is located in the SODO district of Seattle, Washington. It covers 15,000 square feet on the second floor of an old warehouse, with a raised floor computer room and an exhibit area for smaller systems.

ABOUT THE COLLECTION

The collection demonstrates the evolution and growth of computing: increasing capabilities coupled with decreasing size and cost. It is a story of easier access to information, as machines once reserved for governments, corporations, and universities gave way to computers we now call 'personal,' and beyond to the tablets and smartphones that now dominate the information landscape.

FEATURING

7 Mainframes
10 Minicomputers
45 Microcomputers

I wanted to provide a repository that recognized the efforts of those creative engineers who made some of the early break-throughs in interactive computing that changed the world.

— Paul Allen
