

HOW TO CONNECT THE KEYSTONE PRESENCE COLLECTOR ROUTER TO A WAVESPOT ROUTER

The Keystone Presence Collector is a Router that we connect additionally to the Wavespot router. It captures the presence of other Electronic devices that come near and around our ExploreBoards.

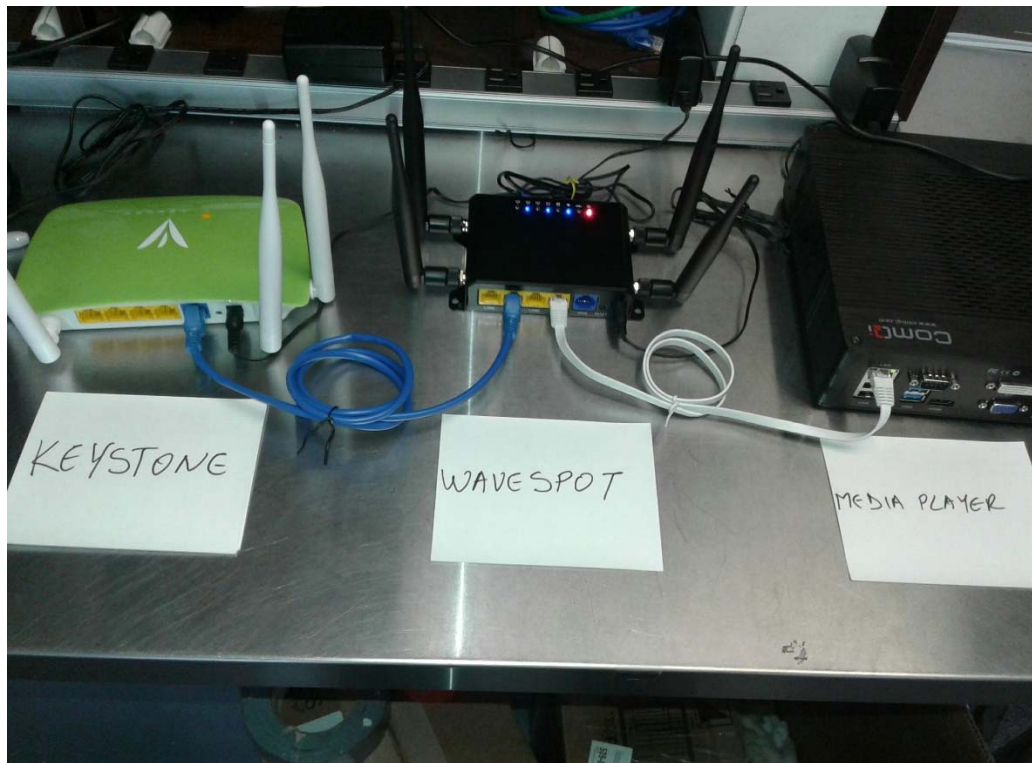

It comes with:

- Its own power adapter
- One blue Ethernet cable
- One Uplink (BLUE) Ethernet Port
- Four Ethernet YELLOW Ports
- One power port and
- One reset button

The two images below show how the Keystone connects to the Wavespot router.

As we can see, the Keystone blue cable connects to the Keystone blue port and to any of the Wavespot yellow ports. The cable from the media player also connects to any of the yellow ports of the Wavespot.

Note: Only a hardline Internet source cable from the Host location can connect to the Blue port of the Wavespot!
