Bonnechere Caves

A visit to The Bonnechere Caves near Eganville, Ontario, in the heart of The Ottawa Valley is truly a step back into time. During the one hour long tour of this remarkable post-glacial solution cave information will be presented that will cause your imagination to work overtime. Before you take the trip underground your guide will explain that at one time most of North America was under a vast tropical sea. You will also learn that the rock you're about to walk through was the mud and the shells of the creatures that once lived in that sea that were deposited as layers at the bottom. Your guide will further explain the effects of glaciation on that bed of old mud, or limestone, that formed The Valleys' lakes, rivers, hills and in our case, The Bonnechere Caves.
